This section is *optional* and can be used to provide a summary of recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

1. Setting up a centralized password management system. Lack of this has shown to slow down business operations. With this in place wait time on resetting passwords, for both employees and vendors, is significantly reduced. That ensures a smooth flow in operations.
2. Password policy needs to be improved. Requirements of a minimum of 8 characters, including a combination of letters, numbers and special characters, is a good start.
3. Considerations for Multifactor Authentication (MFA) system should be put in place.
4. Have backups of critical data in place. This ensures the business does not fall over in the event of an attack. It is useful for business continuity.
5. Set up Identity Access Management (IAM) system for implementing access controls towards least privilege and separation of duties.
6. Install an IDS like Splunk for monitoring.
7. Encryption algorithms from the SHA2 family can be used for encryption of customer PII/SPII
